

Auto-Distribution

LUMEDX's Auto-Distribution Revolutionizes Reporting: Immediately Reduces Costs, Increases Productivity & Serves as a Powerful Relationship-Building Tool for Referring Physicians

LUMEDX's Auto-Distribution feature enables physicians to disseminate reports from Apollo Advance or CardioDoc immediately at the end of procedures. Auto-Distribution provides multiple options to get the report into the chart, secured in Medical Records, and into the hands of the referring physician automatically through:

- Fax
- E-mail
- Print
- Print & mail

Auto-Distribution expedites timely distribution of reports, helping ensure the referring physician promptly receives a comprehensive and visually appealing report—one that serves as a powerful relationship-building tool.

Streamline Process

Auto-Distribution simplifies the reporting process by allowing the import of an Excel contact list or the creation of customized distribution lists. Using his/her own distribution list, the physician can easily and quickly send the report automatically. For example a physician may wish to:

- Send a copy to his/her own office via fax
- Print a copy for Medical Records through the central printer
- Configure Auto Distribution to automatically send the report to the physician(s) listed in the Referring MD fields, the performing physician, etc.

Auto Distribution can be configured to automatically distribute your reports to set locations (Medical Records, Physician office) and the designated referring MD's as soon as you Finalize the report.

Sent reports can be viewed in "Distribution History"

Auto-Distribution lets you customize contact lists for attending and referring physicians, and any other common report destination such as Medical Records. This entails setting up a contact list for the recipient and the preferred method of report receipt, i.e. fax, print, e-mail. The contact list is available for addition to any physician's personal distribution list.

Contrast Auto-Distribution (when used with CardioDoc) with the current process of dictation of the report, transcription of the dictation, review of the transcription, and finally the addition of the report to the patient's chart. This process often results in a 24-48 hour lag between the time of dictation and the time the report is available in the chart. The referral doctor's copy frequently is mailed and does not arrive for several more days. This is assuming that the physician completes the dictation immediately at the end of the procedure.

You can include a unique note when sending a report manually

You can send reports manually to recipients not on the automatic auto-distribution list as needed

Key Auto-Distribution Benefits

- Can be configured for no physician interaction
- Each Report type can have unique distribution list
- Each physician can have a personalized cover sheet
- Distribution log report feature shows all reports and recipients within a selected data range.
- Highly satisfied referring physicians and patients through timely production and distribution of comprehensive, visually appealing reports.
- Immediate access to critical data for subsequent care and decision-making by ensuring that Medical Records and the chart promptly receive a copy.
- Elimination of expensive and time-intensive transcription services.

LUMEDX Auto-Distribution is part of our ongoing effort to build tools that help the specialist attract and maintain the confidence and cooperation of referring physicians.
