New CardioManager™ Outcomes Dashboard by LUMEDX Helps Heart Centers Achieve Premium-Quality Cardiovascular Care at Healthy Margins

Powerful Cardiology Information System is designed for both novice and experienced users of analytical tools

OAKLAND, CA - LUMEDX Corporation, the market leader in fully integrated cardiovascular information systems, <http://www.lumedx.com>, introduces CardioManager Outcomes Dashboard, a powerful yet flexible cardiology information system that provides users with five interactive, highly customizable tools to collect, view, and analyze data to improve clinical, operational and financial outcomes. Web-enabled, users can view CardioManager wherever the hospital network is accessible - including home or office. For a free CardioManager Information Kit, visit <http://www.lumedx.com/pressCardioManager>.

Cardio Manager's analytical tools enable users to quickly collect, slice and dice, and analyze data down to the granular level. The result: users can more readily understand what is happening across the heart center and make more informed decisions faster to:

- Better utilize resources and manage costs
- More accurately monitor quality care
- Facilitate pay-for-performance practices
- Support evidence-based medicine
- Identify solutions that contribute to increased revenue

CardioManager, for example, could help each member of the cath lab team to focus on predetermined measures - procedure volumes, cost-per-procedure, success and complication rates, delay times - and receive an up-to-the case look at the team's performance.

According to LUMEDX Vice President of Strategic Services Chris Winquist, "CardioManager solves one of the most profound challenges facing those who work in a heart center today: How to make sense of and make actionable the mountain of data that is collected across the cardiovascular service line. Cardiology is a data-driven environment and CardioManager can play a critical role in facilitating a feedback loop that supports the implementation of evidence-based medicine, best practices, and pay-for-performance programs. In addition, CardioManager is unique in that it is designed for both novice and experienced users of statistical tools."

COMPLIMENTARY CARDIOMANAGER INFORMATION KIT

To receive a free CardioManager Information Kit, visit <http://www.lumedx.com/pressCardioManager>. Your kit will include CardioManager-In-Action Demo CD, detailed information guides, sample reports and views.

CardioManager is part of the CardioStar productivity suite - a comprehensive set of fully integrated cardiology information systems that includes outcomes management, cardiology PACS, physician documentation, scheduling, and inventory control. CardioStar maximizes efficiency by serving as a single access point where users can manage, analyze, and view patient reports, full resolution images, and outcomes analytics with point-and-click ease.

ABOUT LUMEDX

With over 350 heart center clients worldwide, LUMEDX is the market leader in fully integrated cardiovascular information systems and the No. 1 independent integrator of cardiology information systems. LUMEDX offers the most proven, comprehensive package of clinical information tools, cardiovascular products, and services to help medical institutions enhance quality of patient care, reduce costs, streamline workflow, increase patient volume, and grow revenue.
