LUMEDX Introduces New Mobile Computing Solution for STS Registry

Documenting on the go!

OAKLAND, CA - LUMEDX Corporation, the market leader in fully integrated cardiovascular information systems, <http://www.lumedx.com>, introduces its latest innovation in mobile computing: CardioMobile™. CardioMobile turns the caregiver's PDA into a powerful tool to rapidly collect STS Registry core elements at the point of care – without writing on the data collection form. When finished, caregivers can synch their handheld with the Apollo Advance cardiovascular data repository. The result:

- Rapid data collection
- No redundant data entry
- No second opportunity to introduce errors
- Data that becomes quickly accessible online

LUMEDX also announces that in development is an ACC-NCDR mobile solution. Those interested in receiving information on the ACC-NCDR module as soon as it is available should e-mail rlasnick@lumedx.com.

According to LUMEDX Product Manager Sheila Jones, “By eliminating the problems of paper-based data collection – redundant, error-prone, time-consuming data entry– mobile technology is fast becoming the tool of choice to empower physicians and clinicians to spend more time with patients, while at the same time significantly improve the caregiver's daily workflow.”

CardioMobile is part of the CardioStar productivity suite – a comprehensive set of fully integrated cardiology information systems that includes outcomes management, cardiology PACS, physician documentation, scheduling, and inventory control. CardioStar maximizes efficiency by serving as a single access point where users can manage, analyze, and view patient reports, full resolution images, and outcomes analytics with point-and-click ease.

ABOUT LUMEDX

With over 350 heart center clients worldwide, LUMEDX is the market leader in fully integrated cardiovascular information systems and the No. 1 independent integrator of cardiology information systems. LUMEDX offers the most proven, comprehensive package of clinical information tools, cardiovascular products, and services to help medical institutions enhance quality of patient care, reduce costs, streamline workflow, increase patient volume, and grow revenue.
