

FOR IMMEDIATE RELEASE: MAY 21, 2008

New Anticoagulation Management Software Helps Clinics Enhance Efficiency And Improve Patient Safety

May 21, 2008, Oakland, CA — LUMEDX Corporation, a leading provider of fully integrated cardiovascular imaging and information systems (CVIS), introduces software to manage data and track patients on long-term Coumadin (warfarin) therapy. The Anticoagulation Module empowers clinicians by making critical clinical information accessible immediately, improving patient care and safety.

For more information – including a free Anticoagulation Management Information Kit complete with CD presentation – visit http://www.lumedx.com/cardiovascular/point-of-care_solutions/anticoagulation

The Anticoagulation Module is a part of LUMEDX's suite of integrated cardiovascular imaging and information management tools, delivering a robust and unified Cardiovascular Information Systems solution.

The Anticoagulation Module:

- Increases efficiency by automating the workflow to track lab values, dosages, complications and more
- Makes records immediately accessible, on- or off-site
- Helps satisfy new JCAHO patient safety goals for anticoagulation therapy
- Promotes quality of data by eliminating hard-to-read handwritten records and redundant data entry

According to LUMEDX Director of Product Management Rhonda Staton, “The management of patients taking Coumadin requires access to – and input of – patient information by multiple people in multiple locations. The Anticoagulation Module streamlines this workflow dramatically and ensures up-to-date, safe and efficient patient care.”
