

FOR IMMEDIATE RELEASE: MARCH 18, 2009

LUMEDX Launches New Interventional Radiology Software

IR Solution for Electronic Procedure Records, Billing and Inventory, and JCAHO Compliance

March 18, 2009, Oakland, CA — LUMEDX Corporation, a leading provider of fully integrated medical imaging and information systems, introduces new software to collect interventional radiology procedural information at the point of care. Delivering comprehensive data capture for both general and vascular procedures, the Interventional Radiology module automatically documents JCAHO and patient safety performance measures. This new solution is the first commercial software to offer sophisticated, integrated tools for this vital service line, and was designed to meet hospitals' clinical—and business—objectives.

As part of the LUMEDX suite of patient and clinical business management solutions, the Interventional Radiology module enables easy tracking and monitoring of case details, volumes, billing and more. Performance metrics are immediately available for analysis. Images are integrated into the case record. And electronic procedure reports are thorough and timely. By automating information capture, the module makes it easy for IR physicians and staff to communicate and collaborate with other clinical areas, a key component of top-quality care.

“Interventional Radiology continues to be underserved by the IT marketplace, with no integrated systems to track business and patient management. As hospital budgets tighten, efficient management of the IR suite is imperative to accurately schedule procedures, track inventory, bill for procedures and professional services, review images, report on patient care, and evaluate performance metrics,” says LUMEDX Lead Clinical Product Manager Quana Bert, R.N., A.R.N.P. “The new LUMEDX Interventional Radiology solution supports hospitals' clinical, financial and operational viability by delivering efficient, integrated data and image management—with advanced analytic capabilities.”
