OAKLAND, Calif., June 9 /PRNewswire/ --- The American College of Cardiology has certified LUMEDX Corporation--the industry leader in integrated cardiovascular information systems and the number one provider of ACC software--as an official ACC-NCDR ICD Registry 2 software vendor. LUMEDX's Export to ICD Registry solution is the latest in a suite of software applications developed to address the growing need for impeccable, accessible cardiovascular data, streamlined clinical workflows and superior data management.

As the healthcare industry places more emphasis on quality measurement, transparency and evidence-based care, registry participation becomes increasingly critical. The ACC-NCDR ICD Registry collects data for implantable cardioverter defibrillator procedures. Version 2.0 has been extended to include pediatric ICD implant data; trial, ventricular, defibrillator, and left-heart lead information at time of implant, revision, replacement, or surgical abandonment; updated quality indicators; and more.

"The ICD Registry module represents the very best of LUMEDX. It's a sophisticated solution that makes life easier for heart hospitals because it enables comprehensive data collection while simplifying the registry-participation process." says Katrina Craig Valvis, LUMEDX Manager of Registry Development. "And because LUMEDX software is designed to integrate with other Apollo clinical data repository modules, the ICD Registry Module merges seamlessly with the EP module, providing cardiovascular service lines with robust analysis capability."

LUMEDX's ICD Registry software allows hospitals to:

- Capture data at the point of care
- Improve data accuracy
- Submit automatically to the ACC
- Run reports internally
- Review program performance
