August 10, 2010, Oakland, CA — Do you know if your labs are providing the appropriate evidence-based care? Can you uncover root causes beneath changes in volume and outcome patterns? Can you track whether your heart program is slowing or growing, profitable or not? LUMEDX healthcare analytics can help.

LUMEDX's latest report, "Solving Your Most Critical CV Service Line Problems Using Analytics," features six use cases that detail how to use new analytics tools to answer these and other important questions. Learn how analytics can help you identify, understand and act on data trends that affect quality of care and productivity across your cardiovascular (CV) service line.

Request your free report at <http://www.lumedx.com/analytics/>

Each use case presents a common but critical problem faced by CV center physicians, clinicians and administrators. The use cases also provide instructions, answers and steps to solve the problem—all made possible by LUMEDX analytics software.

You'll see how analytics tools can help:

- Ensure continuity of care for cardiac patients
- Increase your effectiveness with real-time information
- Promote service, operations and clinical excellence
