FOR IMMEDIATE RELEASE

Orlando Health Implements Latest Cloud-Based Performance Analytics from LUMEDX

Oakland, Calif. — March 1, 2018—LUMEDX Corporation, the market leader in cardiovascular data intelligence, announced today that Orlando Health is live with HealthView Analytics, LUMEDX's latest cloud-based performance analytics offering.

LUMEDX's HealthView Analytics technology platform will be used to deliver the Cardiovascular Performance Program (CPP), which provides meaningful analytics along with focused performance-improvement consultation services. The CPP will allow Orlando Health to monitor, measure and improve all aspects of its cardiovascular service line, as well as identify variation in care and find opportunities to reduce cost.

Built on the latest Microsoft Azure cloud technology stack, the HealthView Analytics platform aggregates data using secure data ingestion pipelines from several sources into a central cloud-based cardiovascular data model. All of Orlando Health's nine sites are connected, giving the organization near real-time access to financial, clinical and operational insights, including advanced visualization of registry data, outcomes and risk data; physician scorecards; and more.

"Using the HealthView Analytics technology platform along with the CPP services, hospitals can reduce costs and simultaneously improve quality and patient satisfaction using data they are already collecting in their existing EMR, point-of-care devices, clinical registries and financial systems," said Praveen Lobo, LUMEDX Vice President Strategic Products.

In 2013, Orlando Health successfully deployed LUMEDX's physician structured reporting and image management solutions across five of its campuses. In 2017, the organization signed up to be an early adopter of the HealthView Analytics platform and Orlando Health's financial, operational and clinical teams worked closely with LUMEDX to develop user-friendly and meaningful insights into the data.

Renowned for its cardiac, cancer and surgical care for children and adults, Orlando Health is one of Florida's most comprehensive private, not for profit healthcare networks. It is made up of six wholly-owned hospitals, two partnership hospitals and a skilled nursing facility, serving approximately 1.8 million residents with 2,295 beds. It is also Central Florida's first designated teaching hospital.

LUMEDX is the market leader in cardiovascular data intelligence and a pioneer in cloud-powered healthcare solutions. Our comprehensive suite of software and services enables meaningful analytics, high-performance workflows, optimal integration of clinical and HIS data, and improved continuity of care. We develop all our solutions with the firm belief that the delivery and management of healthcare is best served by a community of providers linked—and empowered—by technology.
